# RANDOLF SEGUBRE

.NET Developer (Full-Stack) | Quezon City, Metro Manila, Philippines
+63 917 102 2203 • rsegubre@gmail.com • randolfsegubre.github.io • linkedin.com/in/rsegubre • github.com/randolfsegubre

## PROFESSIONAL SUMMARY

Full-stack .NET software engineer with 9+ years building and modernizing web and desktop platforms across .NET, JavaScript, SQL, and NoSQL stacks for travel and healthcare enterprises. Known for diagnosing deep, cross-system bugs (security, concurrency, legacy migrations) and for building a personal AI-assisted engineering setup that I use every day.

## PROFESSIONAL EXPERIENCE

### Senior Full-Stack .NET Developer

**Cloud Employee | June 2024 – August 2026**

*Remote / Work-from-Home | Project: Travel & Holidays — Booking Platform Modernization*

- Contributed full-stack development to a live, high-traffic Umbraco CMS 13 booking platform (.NET 8, C#, Vue.js), modernizing it with zero customer downtime.
- Took the initiative on a sustained Content Security Policy (CSP) hardening effort, diagnosing and fixing non-obvious browser-level enforcement and iframe security-boundary edge cases.
- Reviewed colleagues' code as a standing responsibility, flagging redundant logic and sharing reusable patterns with peers and fellow senior developers.
- Took the initiative to research and document cross-application work, including scoping a major Umbraco CMS version upgrade and authoring internal security write-ups.
- Coordinated a completed legacy content migration onto a modern Umbraco-based CMS, hardening the migration tooling over six months.
- Independently built a SQL Server CLR stored-procedure tool that merges customer travel documents into a single PDF, and a scheduler application converting GPX route files and Word documents to PDF for SFTP delivery, leading the migration off commercial document-conversion SDKs to headless LibreOffice across both tools.
- Built and maintained custom Umbraco backoffice property editors (AngularJS) across the platform's content-management systems, including dropdown/date-range pickers, list-view filter editors, and admin tooling, each registered as a live Umbraco data type.
- Improved performance via LINQ/T-SQL and Vue.js optimization.

***Technologies:*** *C#, .NET 8, .NET Framework 4.8, Web API, Umbraco CMS 13, Vue.js, AngularJS, ASP.NET MVC, Razor Pages, MSSQL, GitHub, Jenkins*

### Package App Senior Analyst

**Accenture | January 2022 – June 2024**

*Remote / Work-from-Home | Project: Healthcare — Benefits Administration Platform*

- Served as a senior developer on a claims/benefits-processing platform (ASP.NET Core MVC, Razor Pages), working on performance, data-consistency, and code-quality across two core applications.
- Reviewed colleagues' code as a standing responsibility since promotion, aligned with GitHub's automated code-scanning tooling.
- Optimized search/record-creation workflows with query-based pagination and resolved critical data-consistency and duplication issues across two core applications.
- Led an incremental upgrade of the platform from ASP.NET Core 2.x to 6, sequencing the migration to manage dependency risk without disrupting production.
- Remediated GitHub code-scanning findings and adopted GitHub Copilot for AI-assisted development.

***Technologies:*** *C#, .NET Framework, ASP.NET Core 2.0–6, ASP.NET Core MVC, Razor Pages, JavaScript, SQL Server Management Studio, GitHub, Jenkins, Azure DevOps*

### .NET Developer

**Collabera Inc. | May 2020 – January 2022**

*Remote / Work-from-Home | Project: Healthcare — Member Enrollment Platform*

- Led the Member Additional Detail (MAD) Collection Standardization initiative, handling 834/supplemental-file processing (Add, Change, Term, Void, Reinstatement) across 19 health plans and coordinating closely with QA.
- Implemented 834 EDI file translation/ingestion and established the legacy project framework for a newly acquired state health plan.
- Contributed to migrating 500,000+ member records into a 1M+ record repository and to upgrading the platform's .NET Framework from 4.6 to 4.8.
- Provided L2/L3 production support for inbound 834 file processing via ServiceNow, diagnosing data or code root cause and resolving with peer-reviewed data-correction scripts or direct code fixes, prioritizing urgent data fixes ahead of permanent code fixes given the healthcare domain.
- Maintained a legacy WPF desktop companion application and built React.js/Redux front-end features, resolving data inconsistencies through testing and peer review.

***Technologies:*** *C#, .NET Framework, xUnit, MongoDB, ServiceNow, React.js, Redux, JavaScript, Studio3T, BitBucket, GitLab, WPF, Jenkins*

### .NET Developer

**BCS Technology International | September 2018 – March 2020**

*Makati City, Philippines | Project: Airlines — Disrupted Flights Transfer System*

- Built backend services for a disrupted-flights transfer system, integrating in real time with the Navitaire Dot-Rez SOAP API for flight and status data.
- Designed Entity Framework Code First data models and MySQL persistence for flight-transfer management.
- Achieved 90% backend code coverage with xUnit unit tests, improving reliability and maintainability.
- Built front-end API integrations and interactive UI features (animations, search, responsive interactions) with Vue.js.
- Managed UAT deployments via IIS on AWS EC2, including build creation and manual releases.

***Technologies:*** *C#, ASP.NET Core 2.2, ASP.NET MVC, Vue.js, Amazon EC2, MySQL, Web API, Jenkins*

### Computer Programmer

**F. Gurrea Construction Inc. | June 2017 – July 2018**

*Iloilo City, Philippines | Project: Employee Certification System (Windows Application)*

- Sole developer responsible for an in-house Windows desktop app generating HR certificates (Employment, Attendance, etc.), replacing manual document creation.
- Implemented Dapper-based CRUD operations against Microsoft SQL Server and built an editable print-preview flow for HR to review data before printing.

***Technologies:*** *C#, .NET WinForms, MSSQL, Telerik RadForms*

## CORE SKILLS

| | |
|---|---|
| **Languages & Frameworks** | C#, .NET Framework / .NET Core / .NET 8 (commercial work), .NET 10 (personal projects), ASP.NET (Web Forms, Web API, MVC, Razor Pages), JavaScript, Vue.js, AngularJS, React.js, HTML5, CSS3 |
| **Data & CMS** | MS SQL Server, MySQL, MongoDB, Entity Framework, Dapper, Umbraco CMS 13 (commercial work), Umbraco 18 (personal project) |
| **Security** | Content Security Policy (CSP) hardening, Trusted Types, XSS remediation, security-header/compliance audits |
| **Tools & Practice** | Git / GitHub / Bitbucket / GitLab, Jenkins, Azure DevOps, ServiceNow, xUnit, Jira, AI-assisted development (GitHub Copilot, Claude Code) |

## AI-ASSISTED ENGINEERING & TOOLING

- Built and maintain a personal AI-assisted engineering setup: one source of truth for AI-tool instructions and settings shared across GitHub Copilot and Claude Code, with persistent cross-session memory that carries what I have learned across sessions and machines.
- Configured MCP (Model Context Protocol) server integrations for my own workflow, including a custom server exposing ticket tracking, git operations, and build/test tooling, plus GitHub and Playwright browser-automation servers; wrote an automated code-review skill encoding security and style standards.
- Built an end-to-end AI-assisted ticket workflow for my own use (fetch, analyze, implement, test, document, pull request), and use AI pair-programming as a daily practice.

## EDUCATION

B.S. Computer Engineering — STI College, Surigao, 2016
